The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bogeso et al US 4,136,193 taken with Carre'.

Bogeso et al is applied as in the previous office action and teaches 1-
dimethylaminopropyl-1-phenyl phthalans (citalpram) derivatives of the type recited in the claims. See, for example, column 2 lines 12-29. It was noted that patentees do not show the recited particle size claimed. Petersen et al UK '762 has been withdrawn and Carre' applied in lieu thereof. Carre' teaches a modifying reaction parameters such as temperature and rate of cooling to produce particles of a given size and uniformity. See page 319 first full paragraph. It would have been obvious to one of ordinary skill in the art to modify Bogeso et al using the teachings of Carre'. To modify the primary reference using the teachings of the secondary reference to obtain an optimized expected product, having a more uniform particle size of desired size, by adjusted the process parameters, such as

controlling the cooling rate would not have been unexpected and therefore unpatentable.

No claim is allowed.
